

# 後量量子密碼學 PQCRYPTO Mini-School 微型講座

We will hold a 4-day crash school in Post-Quantum Cryptography on July 12-15. The school will cover the basics of post-quantum cryptography and recent developments. Lectures should be accessible to a college upperclassperson majoring in math, computer science or electrical engineering.

Introductory material on all five basic PQC categories will be covered and developments in lattice-based and isogeny-based crypto will be our focus.

Free for registered attendees, and lunchboxes will be served if you register and identify your food allergies and other requirements.

2022 July  
12 - 15  
Taipei
